

wearing instructions

fold & put on

* For the cradle and front carries, the padding should be flipped on the outside. For the hip carry, padding will be on the inside.

This is the sling unfolded. Find the seam - where the sling has been sewn into a continuous tube.

Fold the sling inside itself.

This makes the sling into a two-layered tube. The curved, seamed, padded end will be hanging down.

Put your arm through the sling. The folded edge will be toward you. The open edges will face away from you.

Rest the sling on your opposite shoulder.

The curved, padded end will be down, directly under the opposite nipple from your shoulder. The open side of the tube will be facing up.
